Databases: MySql, MongoDB

EXPERIENCE

- **Raise A Cloud** (project 1) Link <https://eastwo0d7.github.io/Raise-a-Cloud/> :
- A useful app that allows users to enter a word, form a word cloud of either synonyms, antonyms, or definitions.
- In addition to the word cloud this app will search Youtube using one of the words as the search term.
- I wrote the code for the Youtube API call and return.

It Takes a Village (project 2) Link <https://the-village-1.herokuapp.com>.

- This app was built to help parents that are raising special needs children.
- The idea of this app is to create a social network that keeps databases and allows members to add to them and share to help other special needs children.
- I used MySQL to build the databases for this app.

Better Dad (project 3) link <https://better-dad-app.herokuapp.com>.

- This app we created for families to coordinate through the year.
- For this app we wanted to create a calendar and notification center for families. Each family can create an account with parent child settings for each family member.
- The parents are the admins for the family they are the ones who can schedule chores, pick ups as well as any other event or notification.
- For this app I used Auth0 to for the authentication and tokenization for the accounts allowing the parent child accounts to connect.

Christianbook.com, Peabody,MA — Digital Specialist

October 2007 - PRESENT
